About Us

DIMORE by Qutone Ceramic is one of the most trustworthy manufacturer, Supplier and installer of Engineering & Architectural system aluminium doors and windows. We are continually pushing the boundaries of technology in order to provide you with a diverse range of world-class and inexpensive windows and doors. DIMORE will leave no stone unturned in making your experience rich, whether it's for your home or business needs. And, as a company, we make every effort to make our operations and interactions as transparent as possible. DIMORE assures that each of its goods undergoes a rigorous manufacturing process, ensuring that you receive a quality product. We also notice that all international and national quality requirements have been met.

Furthermore, our Aluminium products are reinforced in a variety of ways to ensure that they are rigid and long-lasting. As a valued customer, you may be confident that our products will provide you with additional security and safety. It's not only the product; expect our support staff to answer any queries you may have or provide you with any information you require in a timely and humble manner.
We are dedicated to combining the engineering of doors and windows with aesthetics and straightforwardly presenting them in our living environment. A gorgeous space, according to DIMORE, can communicate with your thoughts. In terms of products, we consider geography and nature to best balance various window and door performances; we seek the best meeting point for functions and user experience; and we use the most advanced technology and manufacturing processes, from engineering to aesthetics, to integrate products into buildings and create a harmonious relationship between space and nature.

DIMORE's premium window systems allows for a variety of window styles. This, combined with DIMORE's proven reliability, makes it the profile of choice for residential new builds and retro-fit projects. Featuring fixed panes, top opening fanlights and side opening lights, casement windows can be combined to create an almost limitless range of styles, whilst providing the benefit of noise reduction, low maintenance, safety and security and energy efficiency.

Our luxury aluminium Panaroma sliding doors provide an alternative to traditional sliding doors, delivering a panoramic view and transforming the look and feel of your entire home. The flexibility of the Panorama system is so high that it provides architects freedom of choice in terms of height and width and converts their imagination into reality. It is an absolute delight to designers, architects and clients alike, as it's the ultimate selection for indoor/ outdoor assimilation. These aluminium windows sit harmoniously side by side with an extremely slender vertical frame of only 22mm between the glass panels.

Bi-Fold

FOLDING DOOR

DIMORE
architectural solutions

Bi-fold systems are the best way to open up your home and bring it closer to nature. We have designed and built aluminium Bi-fold doors that are known for their durability, design, and performance. Ideal for all types of residential property as well as commercial buildings. Our expertly-crafted doors come in all manner of opening options and configurations. Using slim aluminium profiles with reduced sight lines, you get modern looking doors to meet all manner of your requirements. Our bi-fold system expand your living area by opening of doors and folding on the walls aside. It takes up the least amount of space by folding over on itself. With this, you can make a panoramic opening that doesn't obstruct your view.

Features

Locking Type	Multipoint Locking
Wall Thickness	1.8mm

DIMORE
architectural solutions

Optima

CURTAIN WALL

Features

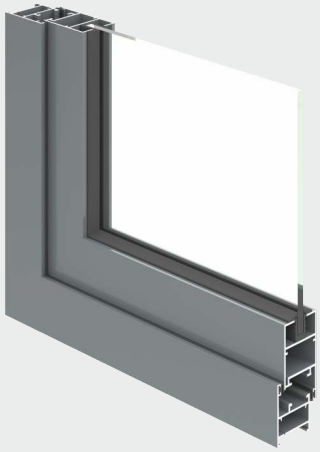

Wall Thickness	2mm to 2.5mm
SGU Glass Range	6mm To 12mm
DGU Glass Range	18mm To 36mm

A curtain wall is defined as thin, usually aluminum-framed wall, containing in-fills of glass, metal panels, or thin stone. The framing is attached to the building structure and does not carry the floor or roof loads of the building.

Slick

CASEMENT WINDOWS

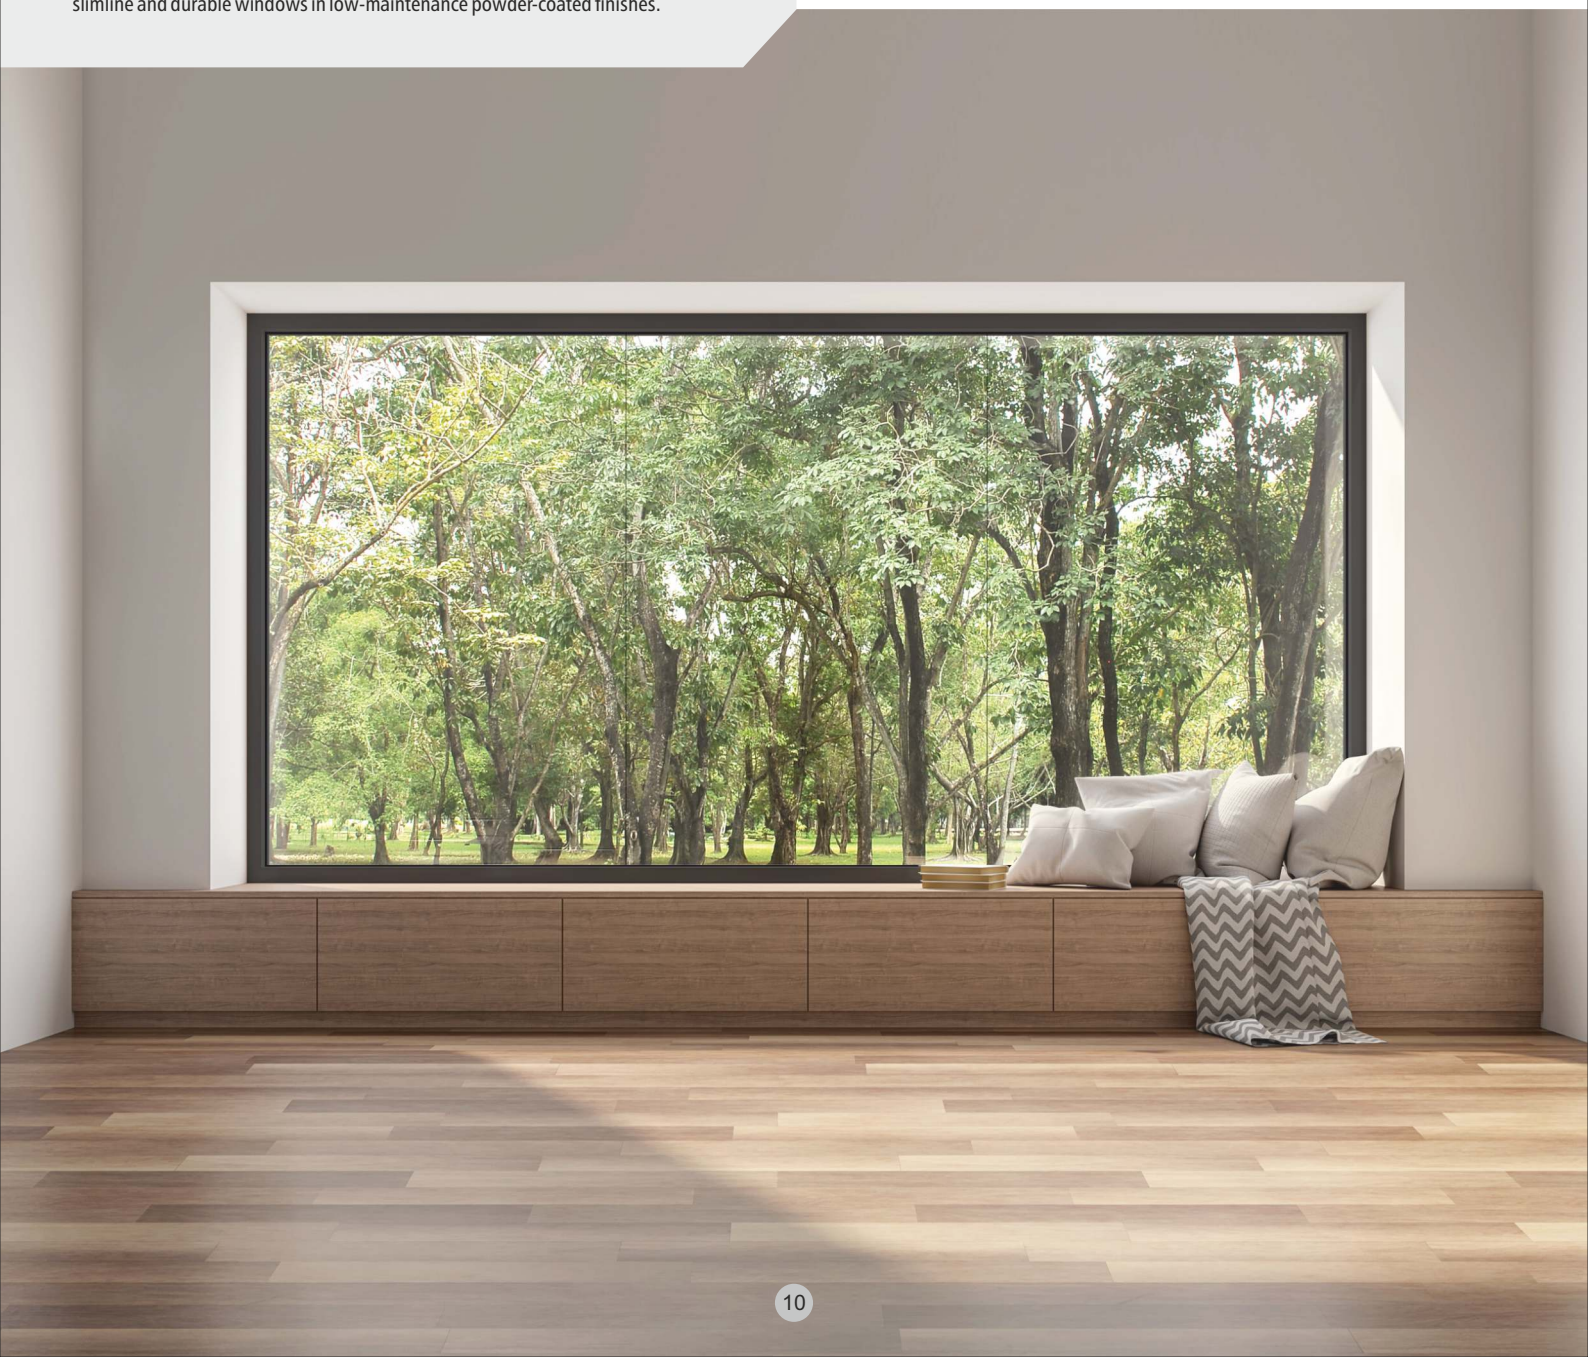

DIMORE
architectural solutions

Slick welcoming in a breath of fresh air, double-hung windows efficiently ventilate from the bottom and the top while staying flush with the wall and not requiring any additional space. Slick is ideal for smaller rooms, bathrooms, and powder rooms. It is designed with the available opening and the quick ventilation required for smaller rooms in mind. Casement windows is perfect for any residential project offering slimline and durable windows in low-maintenance powder-coated finishes.

Features

Locking Type	Single & Multipoint Lock with Handle
Wall Thickness	1.5mm to 1.8mm
Glass Range	4 mm to 6mm
Corner Details	45 Degree Assembly
Sash Height (Max.)	1650mm
Sash Width (Max.)	3000mm
Possible Topology	Fix Window , Top Hung Window, Side Hung Window

Signature

CASEMENT WINDOWS & DOOR

Features

Locking Type	Single & Multipoint Lock with Handle
Wall Thickness	1.5mm to 1.8mm
SGU Glass Range	5mm to 12mm
DGU Glass Range	16mm to 38mm
Corner Details	45 Degree Assembly
Sash Height (Max.)	2400mm
Sash Width (Max.)	3000mm

Signature casement door and windows is exclusively designed for bigger door openings and is compatible to fit safety glass. It can be used for your commercial or residential projects come in many different opening styles. This advanced heavy-duty window comes in top hung, side hung, reversible and even parallel opening options.

FIX WINDOW

There are areas of your home that may not need an actual opening window. These areas may be perfect for letting in light or exposing a stunning view. You can have fixed pane windows installed anywhere on the outer envelopes of your house where there is view or natural surroundings. You can even have large fixed panes installed for indoor dividers between rooms. This way, you can make your home feel lighter by using more glass.

SIDE HUNG WINDOW

Side-Hung windows have a hinge on one side and open outwards (casement) or inwards, like a door. This allows maximum ventilation into the home where airflow is desired. Inward opening windows are also effortless to clean on both sides. Its simple design makes the side hung. This easy-to-open design makes casement windows ideal for tough-to-reach places, such as over a kitchen sink or bathtub.

DOUBLE SIDE HUNG ARCH WINDOW

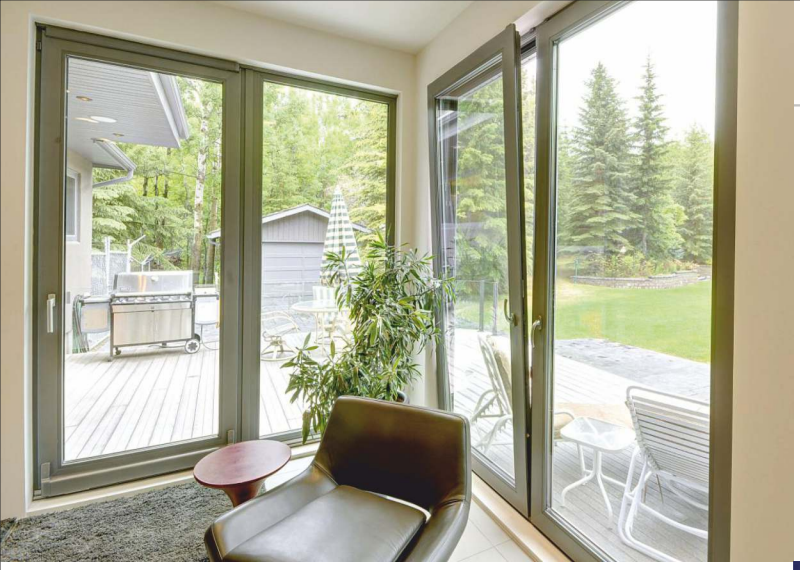

More important than ever these days, homeowners like the fact that double hung windows are energy efficient. The double locking mechanism makes them more tightly sealed and the easy ventilation allows you to let in some fresh air on a nice day and rely less on your home's heating and cooling.

PIVOT WINDOW

A pivot window is essentially an ordinary casement window with another opening mechanism. Here, the casement - the movable part featuring the glazing - is not side-hung on hinges like a door..Our aluminum pivot windows feature an innovative and unique design that allows you to rotate the window sash on a 180° basis either horizontally or vertically from hinges mounted in the centre of the frame. This versatility makes the pivot window ideal for a variety of markets; from residential, education and healthcare to more commercial applications such as office blocks.

TILT & TURN WINDOW

The turn-tilt window has a tilt and turns, two different opening functions. It can be opened fully like a casement window (inwards) or they can be tilted from the bottom so that the top of the window is angled into the room, giving a smaller opening for ventilation. The tilted opening also has the added benefit of increased security and safety as no one can fit through the gap and Turn inward providing a wide opening for emergency egress,. Therefore, turn-tilt windows can often be used in multi-story buildings, as a tilted window prevents fall accidents and facilitates cleaning.

PARALLEL (POP-UP) WINDOW

Aluminum parallel windows are a refreshing option for architects and specifiers looking to create impact and maximize performance. Opening along all four sides to a consistent dimension, our parallel window offers the best possible ventilation, with increased performance almost double that of a traditional casement window. Effective ventilation around the whole perimeter of the window - can achieve approximately twice the natural ventilation of an equivalent sized top hung window*

TOP-HUNG WINDOW

Top Hung windows are another standard design targeted for the residential market. The frame is attached to the casement via a hinge on the top side of the casement, which allows the window to swing open outward and can be stopped at a position through high-quality steel friction stays. With the availability in a variety of colors, DimoreTop Hung Windows can be comfortably adapted in hotels, hospitals, and multi-story buildings.

FRENCH WINDOW

If you're looking for a timeless and elegant window that will let natural light stream into your home, then a French window could be a great option. DIMORE's French windows are truly one-of-a-kind. These windows can be single or double opening ones and are hinged at the side. Typically, these windows are provided with a handle on the inside giving you an additional security feature to your home. French windows can be designed and built with a single plain glass section, Georgian bars can give them a more classic appearance.

SINGLE DOOR

Our single doors are frequently installed in storefronts, offices, and apartment buildings. There is also a selection of low thresholds that comply with part of the building regulations for easily disabled access doors. Aluminum door are most environmental friendly in comparison of wooden door. They have long life have no effect of rust, corrosion and termite effect. Clean easily simply by dusting and washing. They have less maintenance cost. Aluminum doors are good choice for commercial building and offices.

FRENCH DOOR

There is a particular image that comes to your mind, whenever you think of French doors. Among other things, what you envision is a large glass pane that is sectioned into several smaller panels to give it a different but elegant look. These smaller panels are usually called as Georgian bars. There is much more to a French door that merely serving as an entry or exit point. In fact, these doors give you an opportunity to allow natural light to pass through your place and add sheer beauty to the whole area!

SEAMLESS CORNER WINDOW

With the corner slider door range from Dimore, you'll be able to turn your little nooks and alcoves into beautiful balconies and exciting garden spaces. These corner slider doors look great in modern rooms and let in as much natural light as possible, making them even more appealing. With no corner mullion, seamless views are achieved, highlighting spectacular vistas at every corner.

Pleated Mesh

INSECT PROTECTION SYSTEM

The pleated mosquito net is an effective mosquito net for windows in order to keep your home or office environment free of insects. When you are looking for an insect screen, which can keep away mosquitoes, bees, ants, cockroaches, lizards, and other pests from entering your house, ask for pleated mosquito nets for windows.

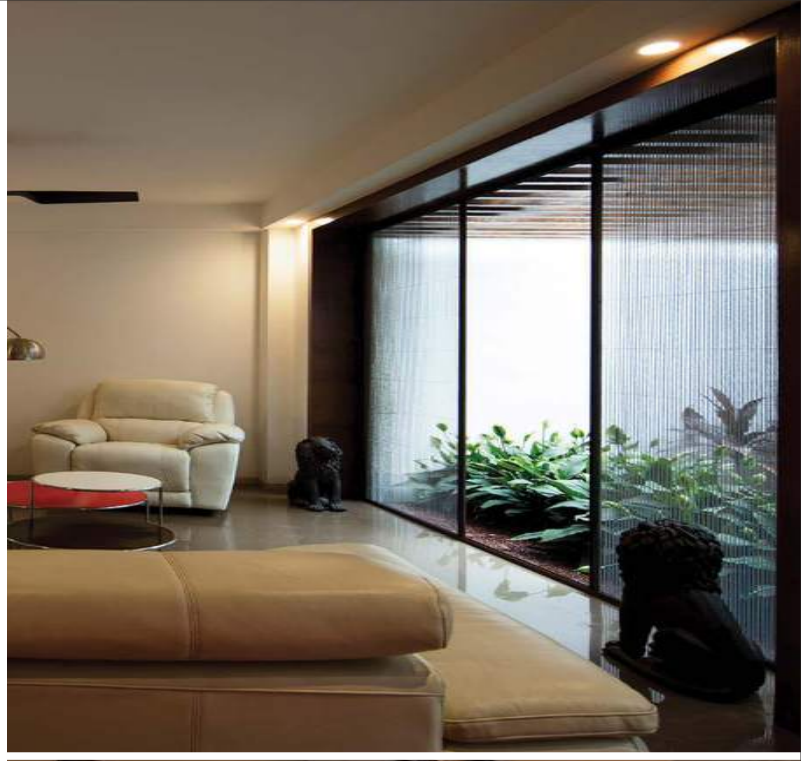

They stop at any required location point and the screen can be stored away in the protective housing when not in use, which keeps mesh for windows clean and safe from potential damage.

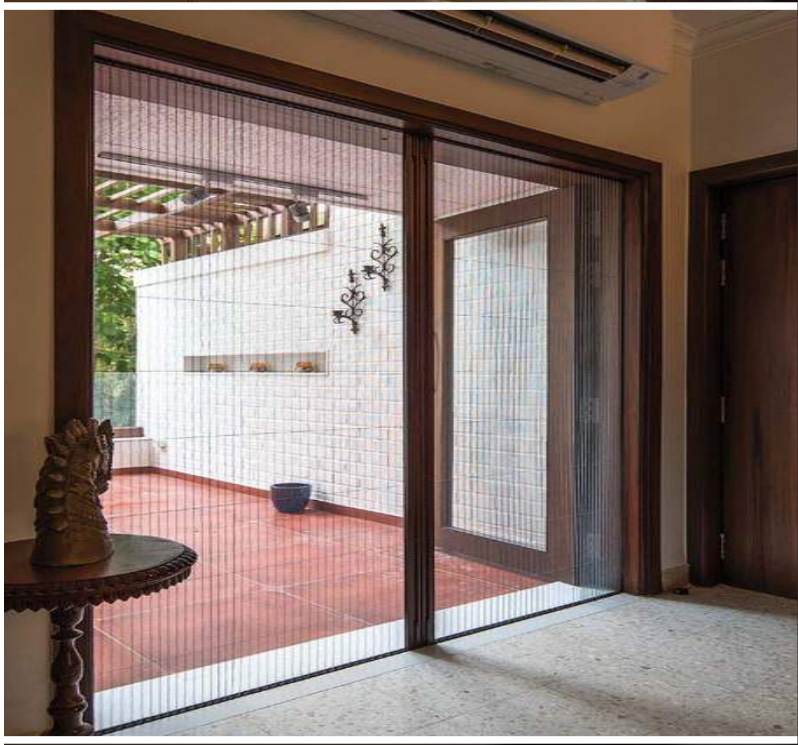

Size

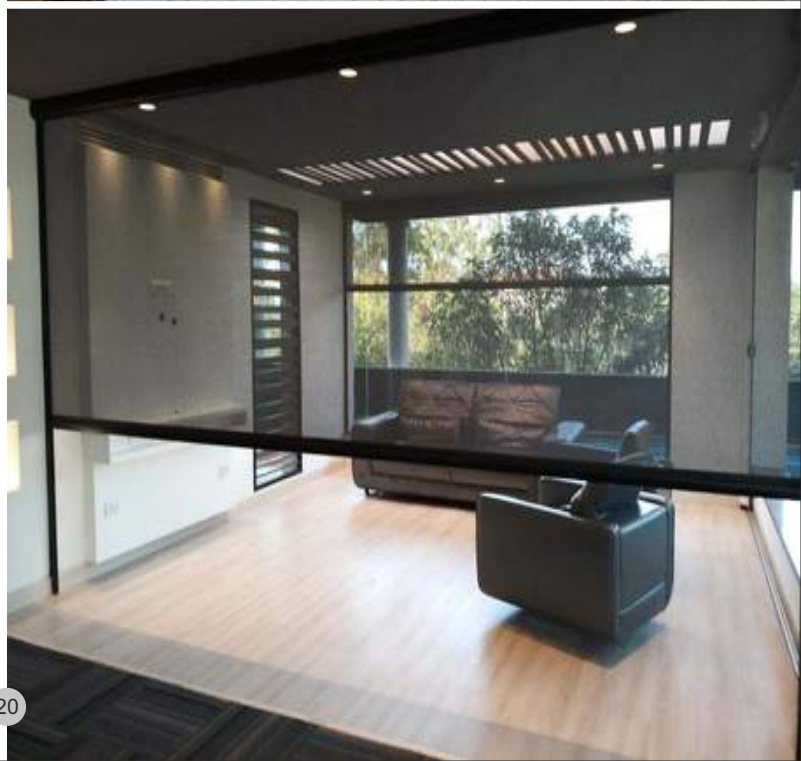

Maximum Wide	10 Feet
Maximum Height	12 Feet

Features

- Stop mosquitoes and other insects from entering
- Design for Vertical & Horizontal Formats.
- Magnetic Locking System
- 5 Year Replacement Warranty
- Automation Possible
- Child Safe Mesh

Honeycomb Blinds

BLACKOUT CURTAINS

Go curtainless with our exclusive honeycomb blinds

The shades are made of multiple cells that trap cold air, insulating the room from heat loss in the winter (and heat gain in the summer.) They can help your company minimize draftiness and reduce its heating bill, providing a smart investment that will more than pay for itself over time.

The number and size of the fabric cell of Honeycomb Blinds does block out noise. However, mostly the added noise reduction comes from their honeycomb shape, which traps noise coming through your windows and stops a majority of it coming into your home, just as it does with air.

Features

- Light filtering ability
- Light blocking ability
- Energy efficient
- Cost savings
- Notice reduction
- Permanent magnetic locking
- Option in horizonatal and vertical
- Easy cleaning

Venetian Blinds

INTEGRATED BLINDS

Integrated blinds. Being encapsulated within the double glass unit of the window, this unconventional system offers outstanding thermal insulation & protection from solar radiation by significantly reducing the amount of heat coming through the windows. Due to the transparency of glass, use of normal double glass units is often not enough to guarantee optimised solar protection. Whereas, these blinds help reduce heat transmission significantly & are suitable for all types of window frames. The movement of the blind, for manual or motorised systems, does not compromise the insulating properties of the double glazing unit.

Features

- Complete Sun Protection
- Thermal Insulated
- Automation Possible

Aluminum louvers

TIMELESS ARCHITECTURAL CONSTRUCTION

Louvre windows are considerably easier to clean than other windows because they tilt 180 degree so you can easily clean both sides of Slats.

Adjustable slats will help to control direct air flow. You can angle the slats from fully closed to fully open and virtually any angle in between. You can actually tilt the slats upward. This allows you to direct cool air towards the ceiling. Louvre windows are versatile because they can fit into whatever interior design your home might have.

Features

- Complete Sun Protection
- Insets & Bug Free
- Maximum Natural Air flow
