NEW Surface : Paragon (NP)

The meaning of the name NP Paragon

Unmatched product performance.

Get ready for NP Paragon, a new matt for exterior applications.

Paragon derives from the Old Italian word *paragone*, which literally means „reference stone“ – a black stone that was formerly used to judge the purity of gold or silver. The metal was rubbed on the stone and the color of the streak it left indicated its quality. In modern English, *paragon* has come to signify a standard against which something should be judged.

the idea of something that is perfect, something that one hopes to attain

a person or thing viewed as a model of excellence or perfection of a kind, one having to equal

a person or thing regarded as a perfect example of a particular quality

Design boxes

Why did we develop a new sample tool?

The most important question our team asked itself throughout the whole process was:
How do designers and architects choose materials for their projects?

What is practical and useful for them and their clients, and how can we best support the creative process?

The GOAL was to develop a tool that focuses on the perfect Customer Journey.

To find the way from the analogue sample with the QR code to the sample fan display on the website.

The system allows our customers to create their own collection and choose their favorites, as well as create their own patterns.

The designers / architects can make a pre-selection of decors that correspond to the wishes of the visiting customer. The box placed in the middle is removable and has additional steel straps that can be opened and allow you to create your "own" favorite combination.

This is not just a box, this is a design experience for the customer - literally
For you to create!
